**HND 1  
RESEARCH METHODOLOGY**

**JULY, 2017.**

## **STATEMENT OF THE PROBLEM**

The effect of waste management practice and disposal in Nigeria calls for a serious attention by both government and the people concerned. This is because the increase in populating, industrial, commercial technological and economic activities has generated to the growth of large volume of waste and its negative effect in our environment which can lead to the spread of infection diseases to human health, waste dumped near a water source also causes contamination of the water body or the ground water source. Direct dumping of untreated waste in rivers, seas and lakes results in the accumulation of toxic substances in the food chain through the plants and animals that feed on it.

Therefore the formulation and implementation of effective strategy is important for the management of waste disposal in Nigeria.

## **AIM**

- To examine the effect of waste management practice on waste disposal in Nigeria.

## **OBJECTIVES OF THE STUDY**

1. To determine the effect of solid waste on the environment
2. To determine the management of waste disposal for effective waste management.
3. To appraise the nature of solid waste in environment.

## **RESEARCH QUESTION**

1. What constitute the effect of solid waste in the environment.
2. What constitute the management of waste disposal for effective waste management.
3. What are the ways to appraise the nature of solid waste management.
