

The Bluetooth FM 4-in-1 transmitter

The Bluetooth FM 4-in-1 transmitter is the perfect solution to access the key functionality of your smartphone while still being able to drive safely. The device, when equipped with your car lighter socket, allows you to perform basic functions such as answering of incoming calls using the device's microphone and car speakers.

Other functions range from play, pause and volume controls and playback of any mp3 or WMA formats of music on the car's stereo from your smartphone wirelessly, or via the USB drive and SD card slot. You can also play music with the aux cord, tune the FM with the 4-in-1 transmitter and charge your device via USB. The USB automatically adjusts the power outage to match your phones at 1.0A, 2.0A or 2.1A.

This device is the best possible way to upgrade your car into a more diverse multimedia system combined with phone and communication abilities while avoiding the often resulting fines and accidents that result from having a phone in hand while driving. You can pick up any of the gold, silver or pink colours for use and the device is very easy to install; simply plug into your car's power outlet, match the frequency with that of your car's and you are good to go.
