Different ways of hacking Facebook and how to protect your Account.

1
Facebook Phishing: Facebook phishing is the most popular way to hack any Facebook account. Hacker used many ways to hack Facebook account. In simple way, hacker creates a fake Facebook login page which looks like legitimate page. When, you entered an email address or phone and password. Then this is stored in text file and send to whoever created fake page. In advance way, they gave you fake offers like one of your friend say I got a recharge by logging through Facebook, try it. When you open the link and fake page is open. When you login through Facebook then other fake page is opened. The scheme is expired. You think that you missed the chance but your login detail went to your friend email address. Always login from URL which ends with Facebook.com domain, it is owned by Facebook and URL always start with https like https://www.facebook.com

2⬇
Keylogger: Keylogger is small program which is installed on the victim computer. After installing, it will take screen shots and record each keystrokes. Then these records are sent to the hacker email address.

3
shocking video: Your friends share a funny video when you play a video then the pop up is shown which will prompt you to download and install a newer version of Adobe Flash player. This download contains a malicious file, when opened. Then use your account to send a spam email, message or share link. This type of virus is known as koobface virus. So next time, when you play a video be careful do not run these popup if it shown close instantly.

4↙
Adware: Some sites offers you to view special features of Facebook like viewing hidden photos, timeline, profile view, removing timeline change the color of timeline etc. for this, you have to paste a script in web browser address bar or there is program , adds on with browser is given. These things are faked.
The following are programs that claim to give you special Facebook powers, but actually cover your news feed and timeline with ads:Facetheme.comPagerage.comProfilecraze.comSocial-

plus.comFacicons.comFacecoolsmileys.comIminent.comBuzzdock.com Connectbar.netElriel.comDropdowndeals.comPagemood.comSweetim. comThis list of program is provided referred from Facebook Help Center.

5

Password stole: How many of users store the password in their browser? I think mostly all did. So it is extremely dangerous, there is many software or small program present in the market which is used to steal the saved password from the victim browser. These type of software or small program is may be installed through email, adds on with browser, non- trustable software, by USB device etc.

6

Social engineering: Attacker is tried to gain the confidence of the victim then deceive to reveal the information. This information is used for hacking purpose. Everyone hear about fake profile. I think all of you receiving daily many friend requests, how many of you accept them. So be careful, when accepting them. They talk you in a normal way and you do not even know how you reveal your information like hey my bank services is really bad and really suck it. Which bank do you use? How the services? Did you really use them? Now they know who is target? your name, email and personal detail? Where you live? Which bank you use and its service? Now they try to hack your id through email scam by using this detail.

7

▶Same Network: If attacker and victim are on same network then he can spoof the legitimate www.facebook.com page to own page when you enter the details then those details sent to hacker. If you are using android phone with Wi-Fi network, then be aware there is app present in the market which is used to hack Facebook account if victim and attacker are same network for this always use https network.

8*Suspicious emails & notifications: The spammers sent you, mail which looks like legitimate mail (notification about friend request, messages, warning about hacking take immediate action, abusing on Facebook etc.) from Facebook. When you click on link then fake login page is opened
