

## How To Get Free Domain:

This is one big advantage you will get this year from me. My name is John Destiny Achugonye. I am an ICT Trainer and Online Marketer with varied successes. You can visit some of my sites: [www.unikworks.com](http://www.unikworks.com)

Enough of the story. Here is the FREE Domian name site ; <https://www.freenom.com>

Let me reiterate here that it might not be a *.com or .net or .info*, but it's still a Top Level Domain (TLD). You should understand the difference between Sub-Domains and TLDs.

### STEP 1:

After opening the site, you will find a box with this "Find a new FREE domain" type in your chosen desired website name in the box ; e.g. you want [www.peterbiz.ga](http://www.peterbiz.ga), please type only *peterbiz* as the case here, then click on "Check Availability" Button.

### STEP 2:

Now you will find FREE TLDs listed that are free and not taken, and click on "get domain" button of your desired TLD. Scroll up a bit or down you will find "Checkout" button and click on it. A major caution here. I would advise you to pick *.ga* TLD, because google indexes it more than other free TLDs.

### STEP 3:

A default 3 months validity option will be shown, click on it to choose 12 months instead. Provide your email address, a link to verify your account will be sent to your email.

### STEP 4:

Find the link in your inbox or junk and then click on it. Continue the registration of your new website name; Fill in your name, Address, Phone ....., accept terms and then SUBMIT. *Viola.....* your domain name is ready and reserved.

### STEP 5:

Now to check your reserved domain go down the <https://www.freenom.com> site and click on "My Domains". You will find your list of Domains created.

NOTE: You can create as many as you want.
